

This document outlines improvements and a new feature in the **1.2 upgrade**.
Rolandprintstudio™ v1.2 is a minor upgrade and will work with existing **v1** licenses.

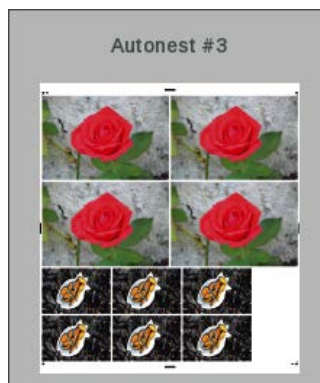

New Feature

Step&Repeat Nesting

This new feature allows you to nest as a block, repetitions of the same image, made by **Step&Repeat**. Then, the blocks are nested together but their images will not be mixed.

With this feature, you can easily create a design swatch book for textile or decoration.

Example of blocks made with **Step&Repeat Standard** and nested with **Nest-O-Matik**.

Please note, if the printing or cutting parameters are changed from one block to another, a new **Autonest** task will be created.

Improvements

Media Explorer

You can now choose an observer orientation while creating profiles (2 degrees, 10 degrees). Please note, this new enhancement only works with spectral measurements.

Spot Color

The following color library has been added to the software: Pantone+ Extended Gamut Coated.

Color Management

The profile browser has been improved with a new layout. Standard profiles appear in one list while favorited profiles appear in a separate list.

Documents

New Manuals

- Roland Profile Center Europe version 1.2
- Roland Profile Center USA version 1.2

Updated Manuals

- User's Manual version 1.2
